

CITATION-PROOF KIT SERIES | VERSION 1.0

Forklift / PIT Readiness Kit

Digital Compliance Kit — \$150

The three-part training program, four-element certification, three-year re-evaluation tracker, refresher-trigger log, and daily pre-shift inspection — mapped to 29 CFR 1910.178(l) with a fully worked example so the Builder is never blank.

What's Inside

- ✓ Operator Training & Evaluation Builder™
- ✓ Training & Evaluation Certification (Form A)
- ✓ 3-Year Re-Evaluation Autopilot Tracker (Form B)
- ✓ Daily / Pre-Shift Inspection (Form C)
- ✓ Refresher-Training Trigger Log (Form D)
- ✓ Citation-Proof Score™ Rubric
- ✓ Inspector's First 10 Questions Card

Instruct → Train → Evaluate → Certify → Re-Evaluate

CITATION-PROOF KIT SERIES | VERSION 1.0

Forklift / PIT Readiness Kit

Forklift Training & Evaluation Documentation Kit — 29 CFR 1910.178(l)

Not another training packet. A system that proves training, evaluation, re-evaluation, refresher triggers, and daily readiness — before OSHA does.

What's Inside

- ✓ **Operator Training & Evaluation Builder™**
Documents the 3-part program across all required truck and workplace topics.
- ✓ **Inspector's First 10 Questions Card**
The common records a compliance officer asks for first.
- ✓ **3-Year Re-Evaluation Tracker Form**
Basic form to track triennial evaluations.
- ✓ **Refresher-Training Trigger Log**
Documents retraining after unsafe operation, incident, new truck type, or workplace change.
- ✓ **Citation-Proof Score™ Rubric**
A 0–100 self-audit mapped to the OSHA training standard.
- ✓ **Training & Evaluation Certification**
Captures the four required certification elements.
- ✓ **Daily / Pre-Shift Inspection Form**
Operator pre-use inspection record.

Instruct → Train → Evaluate → Certify → Re-Evaluate

*Powered Industrial Trucks — OSHA's #6 most-cited standard in FY2024 — 2,248 citations.
The #1 reason: incomplete or missing operator training & evaluation records.*

29 CFR 1910.178(l) — Powered Industrial Trucks

Forklift operator training is one of OSHA's most-cited standards year after year. Penalties are assessed per violation — not per inspection — and under OSHA's instance-by-instance policy a single untrained operator or missing evaluation can generate a separate citation for each exposure. Here is what a citation under this standard can cost in 2026.

PER SERIOUS VIOLATION

\$16,550

The maximum for a serious or other-than-serious citation — e.g., an operator with no completed training, evaluation, or certification.

PER WILLFUL OR REPEAT VIOLATION

\$165,514

The maximum where OSHA shows you knew and did nothing — or cited you for the same training failure before.

HOW A SINGLE INSPECTION ESCALATES

Failure to abate accrues up to \$16,550 per day beyond the abatement date.

Instance-by-instance: five operators running trucks without complete records can become five separate citations — not one.

2026 penalties are frozen at 2025 levels — the highest in the agency's history — with no inflation rollback.

The #1 root cause of a forklift citation is incomplete operator training, evaluation, and certification records under (l)(2), (l)(3), and (l)(6).

THIS KIT IS BUILT TO CLOSE THAT GAP

Every tool, rubric, form, and tracker in this documentation kit maps to the exact 1910.178(l) sub-paragraphs OSHA cites — so you can build defensible, operator-specific documentation and self-audit your program **before OSHA does**.

Source: 2026 OSHA civil penalty schedule (penalties frozen at 2025 levels); OSHA FY2024 Top 10 Most-Cited Standards — Powered Industrial Trucks, 29 CFR 1910.178, 2,248 citations.

IMPORTANT NOTICE — READ BEFORE USING

PIT-00

This kit is a compliance-readiness toolset built on 29 CFR 1910.178(l), OSHA's powered-industrial-truck (forklift) operator training standard. It helps you build defensible, operator-specific training and evaluation documentation — and self-audit your program before OSHA does.

WHAT THIS KIT IS — AND IS NOT

It provides proprietary tools, rubrics, and fillable forms mapped to the exact (l) sub-paragraphs OSHA cites. Completing them honestly builds real, defensible training records.

It does NOT guarantee OSHA compliance, prevent citations, or replace hands-on training or a workplace

evaluation. OSHA does not accept online-only training — practical training and a workplace evaluation on the actual truck type are always required.

The Citation-Proof Score™ is a readiness self-assessment, not a legal certification or an operator license. There is no OSHA “forklift license.” A high score reduces your most-cited exposure — it is not a promise against citation.

Nothing here is legal advice. When in doubt, have a qualified trainer or safety professional review your program (see the Need Help Implementing This? page at the back).

HOW TO GET THE MOST FROM THIS KIT

1. Start with the Citation-Proof Score™ (Tool 2) to find your gaps in ten minutes.
2. Use the Training & Evaluation Builder™ (Tool 1) to document one record per operator, per truck type — study the worked example first.
3. Load every operator into the 3-Year Re-Evaluation Autopilot so no triennial evaluation lapses.
4. Keep the Inspector’s First 10 Questions card (Tool 3) at the front of your PIT training binder.

START HERE — WHAT’S IN THIS KIT

PIT-CONTENTS

Everything in this kit is coded so you can find it fast and reference it in an audit. Work top to bottom, or jump straight to the tool that closes your biggest gap.

Code	Item	What it does
PIT-ALERT	What’s at Stake — 2026 Penalties	The cost of a forklift citation, and why this kit exists
PIT-01	Tool 1 — Operator Training & Evaluation Builder™	Documents the 3-part program + all 22 topics (blank)
PIT-01A	Worked Example — Class IV Sit-Down Counterbalance	A fully completed, defensible operator record
PIT-02	Tool 2 — Citation-Proof Score™ — powered by the Operator Readiness Index™	0–100 self-audit mapped to (l) sub-paragraphs
PIT-03	Tool 3 — Inspector’s First 10 Questions Card	What a CSHO asks, and the record that answers it
PIT-04	Form A — Training & Evaluation Certification	The 4-element (l)(6) certification of record
PIT-05	Form B — 3-Year Re-Evaluation Autopilot Tracker	Triennial evaluation due-date tracker — (l)(4)(iii)
PIT-06	Form C — Daily / Pre-Shift Inspection	Operator pre-use exam log — (p)(1)
PIT-07	Form D — Refresher-Training Trigger Log	Documents refresher events — (l)(4)(ii)
PIT-08	Regulatory Basis & Sources	Every requirement, cited to 1910.178
PIT-09	Need Help Implementing This?	Contact GigLine or upgrade to the Compliance Control System

TOOL 1 — OPERATOR TRAINING & EVALUATION BUILDER™

PIT-01

OSHA cites more employers for incomplete operator training and evaluation records than for any other forklift failure. A generic “watched a video” note does not satisfy the standard — 1910.178(l)(2)(ii) requires three distinct parts (formal instruction, practical training, and a workplace evaluation), (l)(3) requires coverage of specific truck- and workplace-related topics, and (l)(6) requires a four-element certification for each operator.

This Builder walks a non-expert through a complete, defensible record. Complete one Builder per operator, per truck type. A fully worked example follows (PIT-01A).

HOW TO USE THIS BUILDER

1. Complete one Builder per operator and per truck type — training on a counterbalance does not qualify an operator for a reach truck.
2. Answer every shaded field. If a topic does not apply to your workplace, write “N/A” and be ready to justify it — the burden of proof is on you.
3. Steps 3 and 4 are the 22 required topics of (l)(3). Steps 5–6 capture practical training and the workplace evaluation — the two parts online courses cannot satisfy.
4. Step 7 is the (l)(6) certification: it must list operator name, training date, evaluation date, and trainer identity.
5. Re-evaluate each operator at least every three years (Form B) and provide refresher training whenever a trigger occurs (Form D).

Step 1 — Operator & Equipment Identification · 1910.178(l)(1)

Operator name	Employee ID / department
Truck type & class (e.g., Class IV sit-down)	Make / model / unit #
Site / location where operated	Supervisor

Step 2 — Training Format Verification · 1910.178(l)(2)(ii)

OSHA requires all three parts. Confirm each was completed — formal instruction alone (an online course) is not compliant.

Required part (all three mandatory)	Done? (Y/N)	Date / details
Formal instruction (lecture, video, computer, written material)		
Practical training (demonstration + trainee hands-on exercises)		
Workplace performance evaluation (observed in real conditions)		

Step 3 — Truck-Related Topics Covered • 1910.178(l)(3)(i)

Check each truck-related topic covered in training. Mark N/A only if genuinely not relevant to this truck type.

Required topic	Covered	N/A
Operating instructions, warnings, and precautions for the truck type		
Differences between the truck and an automobile		
Truck controls and instrumentation — location, function, operation		
Engine or motor operation		
Steering and maneuvering		
Visibility (including load restrictions)		
Fork and attachment adaptation, operation, and use limitations		
Vehicle capacity and stability		
Vehicle inspection and maintenance the operator performs		
Refueling and/or charging/recharging batteries		
Operating limitations		
Other operating instructions, warnings, or precautions in the operator's manual		

Step 4 — Workplace-Related Topics Covered · 1910.178(l)(3)(ii)

Check each workplace-related topic covered. These are the site-specific hazards an online course cannot address.

Required topic	Covered	N/A
Surface conditions where the vehicle is operated		
Composition of loads and load stability		
Load manipulation, stacking, and unstacking		
Pedestrian traffic in operating areas		
Narrow aisles and other restricted places		
Hazardous (classified) locations		
Ramps and other sloped surfaces affecting stability		
Closed environments and insufficient ventilation (CO buildup)		
Other unique or potentially hazardous workplace conditions		

Step 5 — Practical Training (Hands-On) · 1910.178(l)(2)(ii)(B)

Document the hands-on demonstration and trainee exercises on the actual truck type, under a qualified trainer.

Practical training performed — what, where, and by whom:

e.g., "Operator performed pre-use inspection, load handling, stacking/unstacking, ramp travel, and pedestrian-zone maneuvering on the Class IV counterbalance under trainer supervision on the warehouse floor."

Step 6 — Workplace Performance Evaluation • 1910.178(l)(2)(iii) & (l)(6)

The operator must demonstrate competency in the ACTUAL workplace with real loads, aisles, pedestrian traffic, and surfaces. This is distinct from the practical exercise. Record the trainer's determination.

Workplace evaluation — operator demonstrated:	Yes	No
Safe pre-use inspection and refusal to operate a defective truck		
Correct load handling within rated capacity and stability limits		
Safe travel speed, horn/signal use, and intersection control		
Proper pedestrian awareness and right-of-way in shared areas		
Safe operation on ramps, slopes, docks, and restricted aisles		
Correct stacking / unstacking and fork positioning		
Compliance with site traffic rules and seatbelt use		
Evaluator's determination & any deficiencies noted: <i>e.g., "Operator demonstrated safe, competent operation under normal working conditions. No deficiencies observed. Approved to operate Class IV counterbalance unsupervised."</i>		

Step 7 — Certification of Training & Evaluation • 1910.178(l)(6)

This certification must contain all four required elements. Missing any one is a citable recordkeeping failure.

1. Operator name <i>Required by (l)(6)</i>	2. Date of training <i>Required by (l)(6)</i>
3. Date of evaluation <i>Required by (l)(6)</i>	4. Trainer / evaluator identity & signature <i>Required by (l)(6)</i>
Truck type(s) certified <i>Best practice — name the class</i>	Program administrator sign-off

WORKED EXAMPLE — CLASS IV SIT-DOWN COUNTERBALANCE

PIT-01A

Worked example. A fully completed operator record for a Class IV internal-combustion sit-down counterbalance forklift, showing exactly what a defensible (l) record looks like.

Step 1 — Operator & Equipment Identification

Operator name Marcus D. Reed	Employee ID / department EMP-2041 / Shipping
Truck type & class Class IV — sit-down counterbalance (IC, cushion tire)	Make / model / unit # Toyota 8FGCU25 / FL-07
Site / location DC-3 Warehouse, Kernersville NC	Supervisor A. Bishop, Shipping Lead

Step 2 — Training Format Verification

Required part	Done?	Date / details
Formal instruction	Yes	LMS course + written test (92%) — 05/04/2026
Practical training	Yes	Hands-on on FL-07, warehouse floor — 05/05/2026
Workplace evaluation	Yes	Observed in DC-3 under normal load/traffic — 05/06/2026

Steps 3–4 — Topics Covered (Truck + Workplace)

All twelve truck-related and nine workplace-related topics of (I)(3) were covered. Two examples of each are shown; the full checklist is retained in the operator file.

Truck — Capacity & stability Covered: rated 5,000 lb @ 24" load center; stability triangle explained	Truck — Fork/attachment use Covered: no side-shift attachment; capacity de-rating reviewed
Workplace — Pedestrian traffic Covered: DC-3 marked pedestrian lanes, blind-corner mirrors, horn at intersections	Workplace — Ramps/docks Covered: dock-plate checks, chock/restraint, loaded-uphill rule
Workplace — Surface conditions Covered: sealed concrete, wet-spill protocol, dock-edge awareness	Workplace — CO / ventilation Covered: IC truck — no prolonged operation in the closed cooler

Step 5 — Practical Training (Hands-On)

Operator performed a full pre-use inspection, then practiced load pickup/placement, stacking to 3 high, reverse travel with an obstructed forward view, ramp travel loaded and empty, and pedestrian-lane maneuvering on unit FL-07 under trainer supervision. Repeated the stacking exercise until consistently square and centered.

Step 6 — Workplace Performance Evaluation

Workplace evaluation — operator demonstrated:	Yes	No
Safe pre-use inspection and refusal to operate a defective truck	✓	
Correct load handling within rated capacity and stability limits	✓	
Safe travel speed, horn/signal use, and intersection control	✓	
Proper pedestrian awareness and right-of-way in shared areas	✓	
Safe operation on ramps, slopes, docks, and restricted aisles	✓	
Correct stacking / unstacking and fork positioning	✓	
Compliance with site traffic rules and seatbelt use	✓	
Evaluator determination: Marcus Reed demonstrated safe, competent operation of the Class IV counterbalance under normal DC-3 working conditions. No deficiencies observed. Approved to operate this truck type unsupervised.		

Step 7 — Certification of Training & Evaluation · (I)(6)

1. Operator name Marcus D. Reed	2. Date of training 05/04–05/05/2026
3. Date of evaluation 05/06/2026	4. Trainer / evaluator D. Okafor (Qualified PIT Trainer) /s/
Truck type certified Class IV sit-down counterbalance (IC)	Program admin sign-off V. Lawrence /s/ — 05/06/2026

Next evaluation due: 05/06/2029 (3 years from this evaluation — logged on Form B).

TOOL 2 — CITATION-PROOF SCORE™ — POWERED BY THE OPERATOR READINESS INDEX™

PIT-02

Score your PIT operator-training program against the sub-paragraphs OSHA cites most. Be honest — an inspector scores what you can PRODUCE, not what you intended. Award full, half, or zero points per the legend, total to 100, then read your readiness band.

FULL points Documented, current, signed/dated, and matches practice.	HALF points Exists but incomplete, unsigned, outdated, or generic.	ZERO points Missing, cannot be produced, or contradicted by practice.
--	--	---

Pts	Scored item	CFR sub-paragraph	Your score
12	Written PIT operator-training program exists and names truck types in use	1910.178(l)(1)	_____ / 12
10	Training delivered in all three parts: formal + practical + workplace evaluation	1910.178(l)(2)(ii)	_____ / 10
6	Training/evaluation conducted by a qualified person (knowledge, training, experience)	1910.178(l)(2)(iii)	_____ / 6
12	All required truck-related topics covered (or documented N/A)	1910.178(l)(3)(i)	_____ / 12

10	All required workplace-related topics covered (site-specific)	1910.178(l)(3)(ii)	_____ / 10
20	Four-element certification on file for EACH operator (name, train date, eval date, trainer)	1910.178(l)(6)	_____ / 20
12	Performance re-evaluation of each operator at least every 3 years, tracked	1910.178(l)(4)(iii)	_____ / 12
8	Refresher training provided & documented when a trigger occurs	1910.178(l)(4)(ii)	_____ / 8
6	Training is truck-type-specific (not transferred across incompatible truck types)	1910.178(l)(3)(i)	_____ / 6
4	Daily / pre-shift inspection performed and logged before use	1910.178(p)(1)	_____ / 4
100	TOTAL — Citation-Proof Score™		_____ / 100

What Your Score Means

Score	Readiness	What to do next
90–100	Citation-Proof	Maintain: track 3-year evaluations, retrain on triggers, keep certifications current.
70–89	Mostly Ready	Close the half-point items — usually missing evaluation dates, trainer identity, or a re-evaluation tracker.
50–69	Exposed	High risk. Prioritize 4-element certifications and the 3-year re-evaluation tracker now.
Below 50	Citation Likely	Stop-and-fix. You are missing core records an inspector requests first. Build certifications immediately.

THE ONE MOST EMPLOYERS MISS

The single most common PIT citation is a lapsed 3-year re-evaluation that nobody tracked. If you can produce a current 4-element certification AND a re-evaluation tracker for every operator, you have closed the two gaps inspectors find first. Load the 3-Year Re-Evaluation Autopilot (Form B) now.

TOOL 3 — INSPECTOR'S FIRST 10 QUESTIONS CARD

PIT-03

When an OSHA compliance officer opens a forklift inspection, they ask for records in a predictable order. This card gives you the question, why it is asked, and the exact item from your kit that answers it — so you hand over proof instead of scrambling. Keep this card in the front of your PIT binder.

#	What the inspector asks	Why they ask it	Answer it with (from your kit)
1	"Show me your operator training certifications."	Confirms records exist at all — (l)(6). No certification = systemic finding.	Training & Evaluation Certification (Form A)
2	"Does each certification have all four elements?"	Name, train date, eval date, trainer identity — (l)(6). Missing one is citable.	Builder Step 7 / Form A

3	"Show me the workplace evaluation, not just the course."	Online-only training fails — (l)(2)(ii) requires a practical + workplace eval.	Builder Step 6 — Workplace Evaluation
4	"When was this operator last re-evaluated?"	Triennial evaluation every 3 years — (l)(4)(iii). The most-missed citation.	3-Year Re-Evaluation Tracker (Form B)
5	"Is this operator trained on THIS truck type?"	Training is truck-type-specific — (l)(3)(i). Counterbalance ≠ reach truck.	Builder Step 1 + topic checklists
6	"Who did the training, and were they qualified?"	Qualified trainer required — (l)(2)(iii).	Certification trainer field (Form A)
7	"Show me a refresher after that near-miss."	Refresher triggers — (l)(4)(ii): incident, unsafe operation, new truck, change.	Refresher-Training Trigger Log (Form D)
8	"Show me today's pre-shift inspection."	Daily / pre-use examination — (p)(1).	Daily / Pre-Shift Inspection (Form C)
9	"Did training cover your site's hazards?"	Workplace-related topics — (l)(3)(ii): ramps, pedestrians, CO, surfaces.	Builder Step 4 — Workplace topics
10	"How do you handle temp/agency operators?"	Host employer must verify training + do site-specific eval — (l)(1).	Builder + Form A per agency operator

Field tip: *The absence of a certification, a practical-training record, or a current 3-year evaluation is what turns a walkthrough into a citation — not the absence of a safe operator. If you can produce a complete 4-element certification for every operator in under two minutes, you have already shown an active training program.*¹

KIT-SPINE FORMS

PIT-04 – 07

These four forms are the documents an inspector requests first. Together they form a complete, defensible operator-training program under 1910.178(l). Reproduce as needed — one certification per operator per truck type, one row per operator on the tracker, one inspection log per shift, and a refresher entry every time a trigger occurs.

¹OSHA, 29 CFR 1910.178(l)(6) — the certification of record must contain operator name, training date, evaluation date, and trainer identity, [osha.gov/laws-regs/regulations/standardnumber/1910/1910.178](https://www.osha.gov/laws-regs/regulations/standardnumber/1910/1910.178)

Form A — Training & Evaluation Certification · 1910.178(l)(6) · PIT-04

The certification of record. It MUST contain all four elements: operator name, training date, evaluation date, and the identity of the person who performed the training and evaluation. Missing any one is a citable failure.

Operator name (required — element 1)	Employee ID / department
Truck type & class certified	Make / model
Date of training (required — element 2)	Date of evaluation (required — element 3)

Required training part	Done? (Y/N)	Date / details
Formal instruction		
Practical training (hands-on)		
Workplace performance evaluation		

Trainer / evaluator identity (required — element 4) & signature	Program administrator sign-off / date

This certification satisfies 1910.178(l)(6) only if it contains all four elements: operator name, date of training, date of evaluation, and the identity of the person(s) who performed the training and evaluation.

Form B — 3-Year Re-Evaluation Autopilot Tracker · 1910.178(l)(4)(iii) · PIT-05

OSHA requires a performance evaluation of each operator at least once every three years. The clock runs from the LAST evaluation date, not a fixed calendar date. Log every operator; the “Next eval due” column is your early-warning system against the most-missed citation.

Operator name	Last eval date	Next eval due (+3 yr)	Truck type(s)

The 3-year clock runs from each operator's LAST evaluation date, not a fixed facility date (1910.178(l)(4)(iii)). Review this tracker monthly and schedule evaluations before the “Next eval due” date. A lapsed evaluation is the single most common PIT citation.

Form C — Daily / Pre-Shift Inspection · 1910.178(p)(1) · PIT-06

Powered industrial trucks must be examined before being placed in service, and at least daily (or before each shift when used around the clock). The operator completes this before use; defects remove the truck from service until corrected.

Truck / unit #	Operator
Date / shift	Hour-meter reading

Pre-use check item	OK	Defect	N/A
Tires / wheels — condition, pressure, no damage			
Forks / mast / chains — no cracks, bends, or excessive wear			
Hydraulics — lift, tilt, and attachment functions; no leaks			
Brakes — service and parking brake hold			
Steering — smooth, no excessive play			
Horn, lights, backup alarm, and warning devices			
Seatbelt / operator restraint present and functional			
Overhead guard and load backrest secure			
Data / capacity plate present and legible			
Fuel / battery / fluid levels; no leaks; charging connections			
Gauges, controls, and instrumentation functional			

Defects found & action taken:

If any item is a defect, describe it. A truck in unsafe condition must be removed from service until the defect is corrected (1910.178(p)(1)).

Operator signature	Date / time

Form D — Refresher-Training Trigger Log · 1910.178(l)(4)(ii) · PIT-07

Refresher training is required whenever a trigger occurs — an accident or near-miss, observed unsafe operation, a failed evaluation, assignment to a different truck type, or a workplace change affecting safe operation. Log the trigger, the refresher provided, and re-certify.

REFRESHER TRIGGERS — 1910.178(l)(4)(ii)

Refresher training in the relevant topics is required whenever ANY of these occur:

- Operator observed operating the truck in an unsafe manner
- Operator involved in an accident or a near-miss incident
- An evaluation reveals the operator is not operating the truck safely
- Operator is assigned to operate a different type of truck
- A workplace condition changes in a way that could affect safe operation

Operator	Trigger event (what & when)	Refresher provided (date/topics)	Re-certified by

After refresher training, re-certify the operator (Form A) with the new dates. The refresher record should include the operator's name, the date, the triggering event, and the trainer's identity.

All requirements in this kit map to 29 CFR 1910.178 and OSHA enforcement guidance:

- Three-part training format — formal instruction + practical training + workplace evaluation — (l)(2)(ii); qualified trainer — (l)(2)(iii).²
- Required training topics — truck-related (l)(3)(i) and workplace-related (l)(3)(ii).³
- Triennial re-evaluation at least every three years — (l)(4)(iii); refresher-training triggers — (l)(4)(ii).⁴
- Certification content: operator name, training date, evaluation date, trainer identity — (l)(6).⁵
- Daily / pre-shift inspection — (p)(1). FY2024 citation counts and top-failure ranking.⁶

CHOOSE YOUR EDITION

PIT-21

This is a Forklift Compliance Control System — not a single form or a certificate. Choose the edition that fits how you want to run your program.

Digital Compliance Kit

\$150

Everything, download & self-build.

- ✓ All proprietary tools, rubrics, matrices, and decision trees.
- ✓ The full 22-topic Training & Evaluation Builder™.
- ✓ Citation-Proof Score™ + Inspector's First 10 Questions.
- ✓ Fillable PDF/Word forms — reuse for every operator.

MOST POPULAR

Compliance Control System

\$300

The full running program.

- ✓ Everything in the Digital Kit, plus:
- ✓ Live Excel 3-Year Re-Evaluation Tracker (auto-flags due dates).
- ✓ Operator / Truck Authorization Matrix + 10-tab Binder Map.
- ✓ 30-Day Reset Plan + OSHA First-Pull Packet.
- ✓ Optional QR Evidence Hub setup guide.

Inspector-Ready Binder Edition

\$600

Printed, tabbed, done-with-you.

- ✓ Everything in the Control System, plus:
- ✓ A pre-printed, 10-tab physical binder, assembled for you.
- ✓ Done-with-you setup call to load your operators & trucks.
- ✓ Ready to hand an OSHA officer on day one.

ADD-ON — GigLine QR Evidence Hub Setup

Prefer we set up the digital hub for you? GigLine builds your PIT Evidence Hub, creates the QR code, organizes your secure folders, loads your Authorization Matrix and 3-Year Re-Evaluation Tracker, connects your daily-inspection and refresher forms, and prepares your first-pull inspection packet — under access controls you approve. Available with any edition. Custom quote — book a call.

NEED HELP IMPLEMENTING THIS?

GIGLINE SERVICES

This kit gives you everything you need to build a citation-ready forklift training and evaluation program yourself. If you'd rather have GigLine build it for you, or want the expanded Compliance Control System with the 30-Day PIT Records Reset Plan™ and First-Pull Packet™, we're glad to help.
