GigLine Ongoing Safety Support

Page version: 2.1, reconciled after external review **Recommended route:** /ongoing-safety-support

Navigation label: Ongoing Support **SEO title:** Ongoing Safety Support for Small Employers | GigLine **Meta**

description: Keep inspections, corrective actions, training records, and safety documentation moving with ongoing support from GigLine. Serving small manufacturers, warehouses, contractors, and fleets in the Piedmont Triad. Plans start at \$1,650 per month after an initial readiness assessment.

Hero

Findings stay open. Records go missing. The same hazards return.

Ongoing safety support for small employers that need consistent follow-through but are not ready for a full-time safety manager.

GigLine helps keep inspections, corrective actions, selected safety records, and management follow-up moving month after month.

Plans start at \$1,650 per month following an initial Compliance Readiness Visit.

- Primary button: Request a Fit Call
 - Secondary button: Start With a Readiness Visit
 - Trust line: Piedmont Triad-based | OSHA 30-Hour Certified | Manufacturing and operations experience | U.S. Navy veteran-owned
-

The problem

Safety usually gets handed to somebody who already has a full-time job.

In a small operation, safety often lands on the owner, plant manager, HR manager, maintenance lead, or warehouse supervisor. They care about the work, but production, staffing, quality, customer demands, and daily fires keep pushing it down the list.

The result is familiar:

- Inspection findings stay open
- Training records go missing
- Written programs stop matching the operation

- The same hazards return
- Nobody can show what was corrected
- Management finds out too late that the system was not being maintained

GigLine provides the structure and follow-up to keep that work visible.

What the service does

A monthly safety rhythm your operation can actually maintain.

The starting service includes:

- One scheduled on-site visit each month, up to 2.5 hours on-site
- Monthly facility safety walkthrough
- Corrective-action tracker review and updates
- Review of selected training, inspection, and program records
- One toolbox talk or short safety-meeting resource
- Monthly management review
- Concise leadership summary showing what changed, what closed, and what needs a decision
- Up to 45 minutes per month of non-emergency remote support by email or scheduled phone/video consultation. Limited incident next-step guidance, when provided, uses this same allowance and excludes investigation, on-site response, regulator contact, and after-hours availability.

Each engagement is scoped around the facility's hazards, shifts, locations, current program condition, and management needs.

How it works

1. **Find the gaps.** Every recurring engagement begins with a GigLine Compliance Readiness Visit or approved onboarding assessment. We review the floor and the files so the monthly scope is based on actual conditions.
2. **Set the priorities.** We identify the first 90 days of work, assign owners, establish target dates, and separate ongoing support from larger corrective-action projects.
3. **Keep the work moving.** Each month, GigLine reviews conditions, updates open actions, supports the agreed safety priorities, and shows management what requires attention.

4. **Verify and report.** Completed actions are verified when included in scope. Management receives a clear record of progress, overdue risks, and next decisions.
-

Best fit

Built for small operations without dedicated safety staff.

This service may fit:

- Small manufacturers and fabrication shops
- Warehouses and distribution operations
- Contractors and maintenance operations
- Fleet and transportation operations
- Generally 10 to 50 employees at one primary location
- Leadership teams willing to assign, fund, and complete corrective actions

Employee count alone does not determine the price. Operations with multiple shifts, locations, or higher-risk processes require a custom scope.

Starting investment

Ongoing Safety Support, Starting at \$1,650 per month.

The starting plan is designed for one location, one primary shift, and up to eight total hours of monthly service. Base pricing normally applies to facilities within 45 minutes of Kernersville under normal driving conditions. Higher-hazard operations, longer travel, additional shifts, multiple locations, major incidents, new program development, and specialized services are quoted separately.

New recurring clients begin with a paid Compliance Readiness Visit so GigLine can see the actual operation before agreeing to maintain the work.

The current Compliance Readiness Visit is \$2,500. For a new client entering the standard 90-day initial term at the starting monthly price, the combined initial investment is \$7,450: the assessment plus three monthly payments. A recent equivalent assessment may be accepted only when GigLine determines that it provides a reliable baseline.

Button: Request a Fit Call

What this is and what it is not

Consistent support without pretending a consultant replaces management.

GigLine provides safety assessment, documentation review, corrective-action tracking, coordination, and management reporting within the agreed scope.

The employer retains authority and responsibility for its workplace, employees, equipment, supervision, corrective actions, and compliance obligations. GigLine does not guarantee that every hazard will be identified, that every incident will be prevented, or that a client will avoid citations.

Major incident investigations, OSHA inspection representation, environmental compliance, engineering, industrial hygiene, equipment corrections, complete program development, historical record reconstruction, contractor prequalification portals, and specialized training are separate services or require an appropriate specialist.

Why GigLine

The value is not another binder. It is keeping the system alive.

AI can generate a policy. A template can produce a checklist. Neither can walk your floor, compare the document with the work, ask why the same finding came back, or verify that management closed it.

GigLine connects four things:

FLOOR to FINDINGS to FIXES to PROOF

That means observing what is happening, documenting what needs attention, helping management keep the correction moving, and preserving evidence of the work.

Frequently asked questions

Is this the same as hiring a full-time safety manager? No. It provides defined, recurring professional support at a lower commitment than a full-time employee. The client continues to manage daily operations, supervise employees, approve spending, and complete corrective actions.

Why is an initial Compliance Readiness Visit required? GigLine should not agree to support a program it has not evaluated. The initial visit establishes the condition of the floor, documents, and open risks so the recurring scope and price are responsible.

Is every company under 50 employees charged \$1,650? No. That is the starting price. Hazard level, locations, shifts, incident history, program condition, travel, and requested access affect the final scope.

Does the monthly fee include every safety project? No. The agreement defines the monthly capacity and deliverables. Large corrective-action projects, full investigations, new written programs, specialized training, engineering, industrial hygiene, equipment, and other out-of-scope work are quoted separately.

What does corrective-action tracking include? GigLine records the agreed status, client owner, target date, evidence, and verification status of tracked findings. The monthly service does not include performing physical corrections, directing client labor, purchasing controls, engineering solutions, or completing corrective-action projects unless separately authorized.

What happens when the monthly capacity is used? GigLine will identify the remaining work and either move an agreed priority to the next service period, reduce another included activity, or issue a separate written scope. Additional work does not begin without authorization.

Will GigLine come on-site after an incident or represent us during an OSHA inspection? Not under the standard monthly service. The base plan provides limited, non-emergency next-step guidance within the monthly remote-support allowance. On-site incident response, investigation, regulator contact, final recordability or reportability determinations, and OSHA inspection assistance require a separate written scope and may require legal or other specialized support.

Can GigLine guarantee OSHA compliance? No responsible consultant can guarantee that every hazard will be identified, that every incident will be prevented, or that an employer will never receive a citation. GigLine helps identify gaps, organize action, verify agreed corrections, and improve the evidence behind the client's safety program.

Can you review safety material created with AI? Yes, as a separately scoped service or an explicitly selected monthly review priority. AI-generated programs and procedures are treated as drafts until their regulatory applicability, facility details, training requirements, and field implementation are evaluated.

How long is the commitment? The proposed structure begins with a 90-day initial term so there is enough time to establish a working rhythm and measure progress. Final terms appear in the client agreement.

Final call to action

Stop restarting your safety program every time something happens.

If your operation needs consistent safety follow-through but is not ready for a full-time safety manager, start with a short fit call. We will determine whether ongoing support fits your facility or whether a different GigLine service makes more sense.

Implementation notes for the existing GigLine site

- Add the page under the existing MAINTAIN service category.
- Preserve the site's navy, orange, white, and industrial visual system.
- Reuse the existing request/contact workflow rather than adding immediate checkout.
- Send the primary CTA to a short qualification form, not a calendar alone.
- Qualification form fields: company, contact, location, industry, employee count, shifts, locations, major operations, recent incidents/citations, existing safety contact, desired support, and preferred contact method.
- Add internal links from the Services page, Compliance Readiness Visit page, Corrective Action page, and relevant Field Notes.
- Do not place this beside the \$29-\$600 kits as if it were a self-serve product.
- Add structured FAQ markup if supported by the current application.
- Track CTA clicks, form starts, completed submissions, qualified opportunities, proposals, closes, and 90-day retention.
