

Welcome to the Supervisor Safety Starter System

Nine documents. One system. Built for the person responsible for safety when no one else is watching.

What This System Is

You were handed safety responsibility — maybe with a title, maybe without one. Either way, OSHA holds you accountable. This system gives you the exact documents OSHA expects to see, organized in the order you need to build them, with plain-language instructions at every step.

Every document in this kit maps directly to a specific OSHA standard. When an inspector asks for your written HazCom program, your chemical inventory, or your training records — you hand them a document, not an excuse.

Your Complete Document Set

CODE	DOCUMENT	PURPOSE	WHEN
SS-00	Quick Reference Card	Post at your supervisor station. Emergency contacts, when to call, monthly schedule at a glance.	—
SS-01	Welcome & Usage Guide	This document. Read it first. Sets up the system and tells you exactly how to use each piece.	—
SS-02	Chemical Inventory Log	List every chemical on site. Required under 29 CFR 1910.1200(e)(1)(i).	Week 1
SS-03	SDS Index	Track the location of every Safety Data Sheet. Cross-reference with SS-02.	Week 1
SS-04	Written HazCom Program	Your facility's required written hazard communication program. Fill in, sign, retain.	Week 2
SS-05	30-Day Action Checklist	Step-by-step implementation roadmap. Work through it in sequence.	Weeks 1–4
SS-06	One Phone Call Card	Post at your supervisor station. Six scenarios that require you to call GigLine before anything else.	Post now
SS-07	If OSHA Shows Up	Post near your front entrance. Seven steps in the first ten minutes of an inspection.	Post now
SS-08	Red Flag List	Conditions that require immediate action. Do not wait. Do not guess.	As needed
SS-09	Monthly Safety Inspection	Complete one per month. File all completed checklists. Retain for 12 months minimum.	Monthly

SS-10 Training Record Log	Document every safety training session. Required under 29 CFR 1910.1200(h)(3).	After each training
----------------------------------	--	---------------------

Implementation Schedule — Your First 30 Days

Week 1 Assess

Complete SS-02	Walk every area of your facility. Write down every chemical you find. Do not skip storage rooms, maintenance areas, or break rooms.
Complete SS-03	For every chemical on SS-02, confirm you have a current SDS in GHS format (16 sections). Note the binder tab location.
Identify gaps	Any chemical without an SDS is a violation. Contact the supplier immediately. Do not wait.

Week 2 Fix

Complete SS-04	Fill in your facility information, assign responsibilities, and sign the written HazCom program. File it where it can be produced within 5 minutes.
Order missing SDS	Follow up on any SDS requests from Week 1. Document the request date.
Label audit	Walk the facility again. Every container must have a GHS-compliant label. Replace any that are damaged, missing, or illegible.

Week 3 Train

Conduct HazCom training	Train every employee who works with or near chemicals. Cover: what chemicals are present, where SDS are located, how to read labels, what to do in an emergency.
Complete SS-10	Document every employee who attended. Get signatures. Retain this record indefinitely — OSHA can ask for training records from years ago.

Week 4 Build

Post required documents	SS-06 at your supervisor station. SS-07 near your front entrance. OSHA poster in a visible common area.
Complete SS-09	Run your first monthly safety inspection. File the completed checklist. Set a recurring monthly reminder.
Review SS-08	Read the Red Flag List. Make sure every supervisor knows what conditions require an immediate call to GigLine.

Ongoing — After Week 4

Complete SS-09 (Monthly Safety Inspection) on the same day every month. File every completed checklist and retain for a minimum of 12 months. Update SS-02 and SS-03 whenever a new chemical arrives on site. Re-train any employee who changes roles or begins working with a new chemical. Call GigLine any time you encounter a condition on SS-08 or a situation you are unsure how to handle.

What This System Is Worth

A single serious OSHA violation carries a penalty of up to \$16,550. A willful or repeated violation can reach \$165,514. This system, used consistently, eliminates the most common citation categories for small manufacturing and warehouse operations. The estimated compliance value of this complete system — based on average OSHA penalty exposure for facilities without written programs, training records, and SDS documentation — exceeds \$40,000.
