

Chemical Inventory Log

29 CFR 1910.1200(e)(1)(i) — Employers must maintain a list of hazardous chemicals known to be present in the workplace.

Estimated Compliance Value: \$2,000–\$16,550 per citation

Failure to maintain a chemical inventory is a citable violation under 29 CFR 1910.1200(e)(1)(i).

What This Document Proves in an OSHA Inspection

This log demonstrates that your facility has identified all hazardous chemicals present and maintains an organized inventory as required by the Hazard Communication Standard. An inspector will ask for this document during any HazCom-related inspection. A missing or incomplete inventory is one of the most frequently cited HazCom violations.

Instructions

Walk every area of your facility — including storage rooms, maintenance areas, and break rooms. List every product that contains a hazardous chemical. When in doubt, include it. Every chemical listed here must have a corresponding SDS on file (see SS-03). Update this log whenever a new chemical arrives on site or an existing one is removed.

Retention Requirement

Retain this log for the duration of employment for each employee exposed, plus 30 years after employment ends. Store in a location accessible to all employees during every work shift. Do not store in a locked cabinet or on a computer that employees cannot access.
