

Safety Data Sheet (SDS) Index

29 CFR 1910.1200(g)(8) — SDS must be readily accessible to employees during each work shift.

Estimated Compliance Value: \$2,000–\$16,550 per citation

Failure to maintain accessible SDS for each hazardous chemical is a citable violation under 29 CFR 1910.1200(g).

What This Document Proves in an OSHA Inspection

This index demonstrates that your facility maintains a complete, organized SDS library and that every employee can locate the SDS for any chemical they work with during any shift. An inspector will cross-reference this index against your Chemical Inventory Log (SS-02). Every chemical on SS-02 must have a corresponding entry here.

Instructions

Every chemical listed on SS-02 must have a corresponding SDS entry here. Record the binder tab number or digital file location so any employee can find it in under 60 seconds. SDS must be in GHS format (16 sections) — the old MSDS format has been required to be updated since June 2016. If a supplier cannot provide a GHS-format SDS, contact GigLine before using the chemical.

Critical rule: SDS must never be locked away or stored on a computer that employees cannot access during their shift.

GHS Format Note

GHS (Globally Harmonized System) format requires a 16-section SDS. The old MSDS format is outdated — suppliers were required to transition by June 1, 2016. If you have an old-format MSDS, contact the supplier and request the current GHS-compliant version. Document your request date and follow up within 30 days.
