Purpose of This Document

This document is your facility's written Hazard Communication Program, required by OSHA under 29 CFR 1910.1200(e)(1). It must be available to employees and OSHA inspectors upon request. Complete every section, sign and date it, and store it in a location accessible to all employees during every work shift.

When an OSHA inspector asks for your written HazCom program, you hand them this document. A facility without a written program faces a citation of up to \$16,550 per violation.

Estimated Compliance Value: \$16,550 per citation avoided

A missing or incomplete written HazCom program is one of OSHA's top 10 most-cited violations.

Written Hazard Communication Program

29 CFR 1910.1200 — Complete all sections. Sign and retain.

Section 1 — Purpose and Scope

This Hazard Communication Program establishes the procedures for ensuring that information about the hazards of all chemicals used at this facility is known and communicated to all employees. This program applies to all work operations at this facility where employees may be exposed to hazardous chemicals under normal working conditions or in foreseeable emergencies.

Section 2 — Responsible Person

The following person is responsible for implementing and maintaining this program:

Name:

Title:

Phone:

Date Assigned:

Section 3 — Chemical Inventory

A list of all hazardous chemicals used or stored at this facility is maintained on SS-02 (Chemical Inventory Log). This list is updated whenever a new chemical is introduced to the workplace or an existing chemical is removed. The chemical inventory is stored at:

Location:

Section 4 — Safety Data Sheets (SDS)

Safety Data Sheets are maintained for every hazardous chemical on the chemical inventory (SS-02). SDS are organized and indexed on SS-03 (SDS Index). All SDS are in GHS format (16 sections) as required. SDS are accessible to all employees during every work shift and are never locked away. The SDS binder or file is located at:

SDS Location:

Backup Location:

Section 5 — Container Labeling

All containers of hazardous chemicals at this facility are labeled, tagged, or marked with: (1) the identity of the hazardous chemical, (2) appropriate hazard warnings, and (3) the name and address of the manufacturer. Labels must not be removed or defaced. Damaged or illegible labels must be

replaced immediately. Secondary containers must be labeled with the chemical identity and hazard warnings.

Section 6 — Employee Training

All employees who work with or may be exposed to hazardous chemicals receive training at the time of initial assignment and whenever a new hazard is introduced. Training records are maintained on SS-10 (Training Record Log). Training covers: the requirements of the HazCom standard, the location of the written program and SDS, how to read and interpret labels and SDS, and the physical and health hazards of chemicals in the work area.

Training conducted by:

Training frequency:

Section 7 — Non-Routine Tasks and Contractors

Before any non-routine task involving hazardous chemicals is performed, employees will be informed of the specific chemicals to which they may be exposed and the protective measures required. Contractors working at this facility will be informed of the hazardous chemicals they may encounter and will be provided access to SDS for those chemicals.

Section 8 — Signature and Review

This program has been reviewed and is accurate as of the date signed below. This program will be reviewed annually and updated whenever workplace conditions change.
