

TEMPLATE 05

Capacity Ledger, Standard Template

The internal time log used to keep every service month inside the agreed eight-hour capacity. Every hour or partial hour is captured here before it appears in the client summary.

Capacity Ledger, Standard Template

Purpose

The Capacity Ledger is GigLine's internal defensible record of the time spent on each client's engagement each month. It supports:

- Transparent capacity conversations with the client
- Change-order justification when a month runs over
- Historical evidence if the scope of the engagement is ever challenged
- Continuous improvement (where GigLine's time is actually going month over month)

The ledger is internal. Its summary (Section 7 of the monthly management summary) is what the client receives.

Ledger structure

Every entry uses the following fields. Keep one ledger file per client per calendar year: `GL - [CLIENT-CODE] - capacity-YYYY.xlsx`.

FIELD	STANDARD
Date	ISO date, YYYY-MM-DD
Start time	24-hour local, HH:MM
End time	24-hour local, HH:MM
Duration	Auto-calculated, decimal hours to nearest 0.25
Activity type	On-site / Prep / Remote / Meeting / Admin / Travel
Corrective actions touched	Comma-separated Finding IDs, or blank
Deliverable produced	e.g., "Sept management summary" or "email response to plant manager"
Notes	Brief, factual

Activity type definitions

TYPE	COUNTS AGAINST MONTHLY CAPACITY	DESCRIPTION
On-site	Yes	Walkthrough, on-site record review, close-out. Capped at 2.5 hours per visit.
Prep	Yes	Reviewing prior summary, pulling records, drafting walkthrough plan.
Remote	Yes	Email, scheduled phone or video, short document reviews. Capped at 45 minutes per month.
Meeting	Yes	Monthly management review meeting.
Admin	Yes	Documenting time, updating tracker, saving photos to client folder.
Travel	No	Drive to and from site within the 45-minute radius. Not billable, not against capacity.

If a client is outside the 45-minute radius and the extended travel was agreed in writing, treated as billable, and reflected on the invoice, log Travel as an activity type with a "Billed separately" note.

Monthly rollup

At the end of every service month, roll the ledger into these totals:

BUCKET	HOURS
On-site (walkthrough + review + close-out)	#
Prep	#
Remote support (client-billable capacity)	#
Meeting (management review)	#
Admin (documentation, tracker updates)	#
Total capacity used	#
Capacity remaining out of 8 hours	#

Overrun handling

When the month is projected to exceed 8 hours, the SOP requires that GigLine notify the client in writing before overrunning. Log the overrun conversation in the ledger:

- Date of notice
- Client-side person notified
- Option chosen (defer priority, reduce another activity, change order)
- Any written confirmation received

If GigLine absorbs an overrun as a one-time courtesy, log it explicitly:

- "Absorbed [# hours] as one-time courtesy, next overrun requires change order."

More than one absorption per quarter for the same client is a signal for scope renegotiation at renewal.

Retention

Keep the current-year ledger in the client's private folder. At year-end, archive it alongside the corrective-action tracker archive. Retain the ledger for the same minimum six years as the tracker.
