

HAZARD COMMUNICATION PROGRAM

GL-HAZCOM-001 — Written Program per OSHA 29 CFR 1910.1200(e)

Version: 1.0

Issue Date:

Reviewed:

Company Name:

Approved by:

1. PURPOSE AND SCOPE

This written program is established to comply with OSHA's Hazard Communication Standard, 29 CFR 1910.1200(e), and applies to all workplaces where hazardous chemicals are used, stored, or handled.

The purpose of this program is to ensure that all employees understand the chemical hazards present in their work environment and the protective measures available to them. This includes:

- Identifying and listing all hazardous chemicals in the workplace
- Maintaining Safety Data Sheets (SDS) for every hazardous chemical
- Ensuring all chemical containers are properly labeled
- Training employees on chemical hazards and protective measures
- Informing employees about hazards during non-routine tasks
- Communicating hazard information to contractors and other employers on-site

This program will be reviewed at least annually and whenever new hazards, processes, or chemicals are introduced.

2. PROGRAM LOCATION AND ACCESS

The written HazCom program and SDS binder are kept at:

Primary Location:

Backup Location:

Digital Backup:

Employees can access these documents without asking permission during any shift.

3. RESPONSIBILITIES

Role	Responsibilities
Owner / Manager	• Maintain this written program and ensure compliance • Collect and maintain Safety Data Sheets for all chemicals • Schedule and document employee training • Review and update chemical inventory quarterly • Ensure program is reviewed annually
Supervisor	• Update SDS binder when new chemicals arrive • Verify all containers are properly labeled • Conduct or coordinate employee training • Report missing SDS to owner within 24 hours • Brief employees on hazards before non-routine tasks
Employees	• Read and follow container label instructions • Report missing or damaged labels immediately • Report missing SDS to supervisor • Follow safe handling procedures • Attend required HazCom training

4. CHEMICAL INVENTORY

A current inventory of all hazardous chemicals is maintained at this facility. The inventory is updated whenever chemicals are added or removed, and reviewed quarterly.

No employee may handle a chemical without an SDS on file.

Chemical Name	Location	Primary Hazard	SDS on File

Continue inventory on additional sheets as needed.

5. SAFETY DATA SHEET (SDS) MANAGEMENT

Safety Data Sheets are maintained for every hazardous chemical used at this facility. SDS are obtained from chemical suppliers before new chemicals are introduced to the workplace.

SDS Procedures:

- SDS binder is updated quarterly and whenever new chemicals arrive
- All employees have access to SDS during their work shift without requiring supervisor permission
- Missing SDS are corrected within 3 business days
- SDS are obtained from suppliers before any new chemical is put into use
- Digital backup copies are maintained in case physical binders are damaged

If you cannot find the SDS for a chemical you are about to use, stop and notify your supervisor.

6. CONTAINER LABELING

All chemical containers must display proper labeling as required by 29 CFR 1910.1200(f).

Required Label Elements:

- Product identifier (chemical name or code matching SDS)
- Appropriate hazard pictogram(s)
- Signal word (Danger or Warning)
- Hazard statement describing the nature of the hazard
- Precautionary statements for safe handling

We do not use unlabeled containers.

If a label is damaged or unclear, the container is taken out of service until it is relabeled.

Secondary Containers:

When chemicals are transferred to secondary containers, the container must be labeled with the product identifier and applicable hazard warnings. Portable containers for immediate use by the employee who performed the transfer are exempt only if the employee maintains control of the container throughout the work shift.

GHS HAZARD PICTOGRAM REFERENCE

These symbols appear on chemical labels and SDS. Learn to recognize them.

Pictogram	Hazard Class
Health Hazard	Carcinogen, respiratory sensitizer, reproductive toxicity, target organ toxicity, mutagenicity, aspiration toxicity
Flame	Flammable liquids, gases, aerosols, solids; pyrophoric materials; self-heating; emits flammable gas; self-reactive; organic peroxides

Exclamation Mark	Irritant, skin sensitizer, acute toxicity (harmful), narcotic effects, respiratory tract irritation
Gas Cylinder	Gases under pressure (compressed, liquefied, dissolved, refrigerated liquefied)
Corrosion	Skin corrosion/burns, eye damage, corrosive to metals
Exploding Bomb	Explosives, self-reactive materials, organic peroxides
Flame Over Circle	Oxidizers — may cause or intensify fire
Skull & Crossbones	Acute toxicity (fatal or toxic if swallowed, inhaled, or in contact with skin)
Environment	Aquatic toxicity (hazardous to aquatic environment)

7. EMPLOYEE INFORMATION AND TRAINING

All employees who may be exposed to hazardous chemicals receive training as required by 29 CFR 1910.1200(h).

Training Type	Timing
Initial Training	Within 30 days of hire, before chemical exposure
Annual Refresh	All employees, every 12 months
New Chemical	Within 30 days of introduction to workplace
Job Change	Before exposure to new chemical hazards

HazCom training records are retained for at least three years from the date of training.

8. NON-ROUTINE TASKS AND CONTRACTORS

Per 29 CFR 1910.1200(e)(1), employees are informed of chemical hazards associated with non-routine tasks before performing them.

Non-Routine Tasks (e.g., maintenance shutdowns, equipment cleaning):

- Supervisor identifies chemical hazards associated with the task
- Employees are briefed on specific hazards before work begins
- Required PPE and protective measures are reviewed
- Emergency procedures specific to the chemicals are communicated
- SDS for all chemicals involved are reviewed and accessible

Outside Contractors:

Per 29 CFR 1910.1200(e)(2), when contractors perform work on-site:

- We inform contractors of any hazardous chemicals their employees may encounter
- We provide access to Safety Data Sheets for those chemicals
- We explain our labeling system and any precautionary measures
- We require contractors to provide SDS for any hazardous chemicals they bring on-site
- We require contractors to inform us of hazards their chemicals may create for our employees

Multi-Employer Worksites:

When other employers have employees working at this facility:

- We share SDS information for chemicals their employees may be exposed to
- We communicate our labeling system and explain any site-specific labels
- We coordinate emergency procedures and ensure all parties know chemical hazard locations

9. PROGRAM REVIEW

This Hazard Communication Program is reviewed:

- At least annually
- Whenever new hazardous chemicals are introduced
- Whenever processes change in ways that affect chemical exposure
- Following any chemical-related incident or near-miss
- When regulations are updated

PROGRAM AUTHORIZATION

This program has been reviewed and approved for implementation at this facility.

CHEMICAL STORAGE COMPATIBILITY

Do not store incompatible chemicals together. Separate by hazard class.

Hazard Class	Store Away From	Examples
Flammables	Oxidizers, corrosives, heat sources	Acetone, alcohol, gasoline, thinners
Oxidizers	Flammables, organics, reducing agents	Bleach, peroxides, nitrates
Corrosives - Acids	Bases, metals, flammables, oxidizers	Muriatic acid, battery acid, vinegar
Corrosives - Bases	Acids, metals, flammables	Ammonia, lye, degreasers
Toxics	Food, incompatible chemicals	Pesticides, solvents, heavy metals
Compressed Gas	Heat, falling hazards, incompatible gases	Propane, oxygen, acetylene

OSHA WALK-THROUGH READY

HazCom Quick Check

Use this checklist before any inspection or audit to verify HazCom compliance.

✓	Requirement	Verification
☐	Written program updated this year	<i>Signed by owner, review date current</i>
☐	SDS binder complete and indexed	<i>All chemicals on inventory have SDS on file</i>
☐	SDS binder location posted	<i>Employees know where to find it without asking</i>
☐	All containers properly labeled	<i>No secondary containers without labels</i>
☐	Training current (last 12 months)	<i>All employees documented, sign-off sheets filed</i>
☐	New chemicals added properly	<i>Inventory and SDS updated within 30 days of arrival</i>
☐	Non-routine task procedures in place	<i>Employees briefed before maintenance/shutdowns</i>
☐	Contractor communication documented	<i>SDS shared, hazards communicated both ways</i>

CHEMICAL EMERGENCY QUICK REFERENCE

Spill Response — STOP, CONTAIN, REPORT

- STOP work immediately. Alert others in the area.
- CONTAIN the spill if safe — use absorbent, block drains, prevent spread.
- REPORT to supervisor. Consult SDS for specific cleanup procedures.
- Do not attempt cleanup without proper PPE and training.
- Evacuate if spill is large, involves unknown chemicals, or you feel unwell.

Exposure First Aid

Exposure Type	Immediate Action
Eye Contact	Flush with water for 15+ minutes. Remove contacts. Seek medical attention.
Skin Contact	Remove contaminated clothing. Wash with soap and water for 15+ minutes.
Inhalation	Move to fresh air. If not breathing, call 911 and begin CPR if trained.

Ingestion	Do NOT induce vomiting unless SDS directs. Call Poison Control: 1-800-222-1222
