

Facility / Location: _____

Talk Date: _____

Supervisor / Trainer: _____

Topic: Hazard Communication Basics

Supervisor Instruction

Use this toolbox talk to review basic Hazard Communication requirements with employees. Show employees where SDS are located, how to identify chemical hazards, how to read labels, and what to do if exposure occurs. Collect signatures below, have each employee complete SS-09B, then file both pages together as one training record.

Toolbox Talk — Hazard Communication Basics

1. What is Hazard Communication?

OSHA requires employers to inform employees about hazardous chemicals they may work with or be exposed to.
2. Where are the SDS located?

Show employees the physical SDS binder or electronic SDS access point. Employees must be able to access SDS during their work shift.
3. How to read a chemical label

Review the signal word, pictograms, hazard statements, precautionary statements, product identifier, and supplier information.
4. What to do if exposure occurs

Stop work if needed, notify the supervisor, follow the first aid steps listed in the SDS, and call emergency help when required.
5. Employee right-to-know

Employees have the right to access SDS, understand chemical hazards, ask questions, and report unsafe chemical conditions.

Employee Sign-In — Attendance Record

#	Employee Name (Print)	Job Title	Signature	Date

Training Record Reminder

File this completed toolbox talk and attendance record with the facility safety records. Employees complete the Knowledge Check (SS-09B) separately. Training should be repeated when new chemical hazards are introduced or when employees need refresher instruction.
